Questions		
	pace highlights there is significant capacity for new housing through redevelopment in	
	but to accommodate housing growth in Selwyn and Waimakariri it identifies additional	
-	ound Rolleston, Rangiora and Kaiapoi. Do you agree or disagree with this approach and why?	
Agree/disagree	Do not agree	
Comment	There is no justification for doing so. These towns clearly do not have employment sufficient for	
	their populations, as the 100000 vehicle trips per day shows. the plan includes very little in	
	terms of additional business land or encouragement for businesses to locate there. the shortfall	
	in housing predicted is premised on commuting to christchurch, not any demand from industry. it isn't sustainable in terms of the RMA or in any other way, including fossil fuel use, emissions,	
	road network capacity. do you actually hate polar bears? 30000 more houses is a significant	
	amount. PT uptake in these places is very low.	
Question 2: Our S	pace adopts the current planning framework that encourages a range of new housing types,	
especially in the central city, close to suburban centres within the City and around existing towns in Selwyn and		
Waimakariri. Do you agree or disagree with this approach and why?		
Agree/disagree	Somewhat agree	
Comment	agree in relation to the city. selwyn and waimak don't need any more housing, as above.	
Question 3: Our Space proposes to develop an action plan to increase the supply of social and affordable housing		
across Greater Christchurch and investigate with housing providers different models to make it easier for people		
to own their own home. What elements should be included in this action plan?		
Comment	distribution of units within GC and in relation to shops/services, and urban design.	
Question 4: Our Space adopts the current planning framework that directs new commercial development (office		
and retail) to existing centres to retain their viability and vitality, especially the central city, suburban centres and		
town centres in Selwyn and Waimakariri. Do you agree or disagree with this approach and why? What further		
measures would s	support such development?	
Agree/disagree	Agree	
Comment	office space at the airport should be capped at currentl levels to encourage development in the	
	city centre	
Question 5: The Canterbury Regional Policy Statement and the District Plans for Christchurch City and Selwyn and		
	icts have already identified sufficient capacity for new industrial businesses. Do you agree or	
disagree this is su	fficient and in the right location and why?	

Comment as above, selwyn and waiak have a massive employment shortfall, resulting in 10000vpd int christchurch. there is evidently insufficient industrial or other activities on these districts. Question 6: The proposals in Our Space are informed by a Capacity Assessment that considers future demands f housing and business land, based on demographic changes and projections from Statistics New Zealand, and like changes in our economy (including through business sector trends and impacts from technological change). Do garee or disagree with our evidence base and why? Agree/disagree Do not agree Comment as above, 100000vpd into christchurch daily for work would suggest insufficient employment base in selwyn and waimak, so whay make it worse worth 30000 more houses. are you expecting taxpayers and ratepayers to pay for the lifestyle choices of selwyn and waimak residents. Question 7: Our Space promotes greater densities around key centres to increase accessibility to employment a services by walking, cycling and public transport. This aligns with recent transport proposals that signal more high frequency bus routes and an intention to delive rapid transit along the northern and south-west transport corridors. Do you agree or disagree with this approacci and why? Agree/disagree Somewhat disagree Comment RT is fine but are ccc ratepayers going to bear the brunt of that cost? i don't see why they should when the benefits will largely be to selwyn and waimak commuters. also given low PT uptake, i'd suggest it won't be used and people will till commute from selwyn and waimak by car. Comment RT is fine but are ccc ratepayers going traffic signals is a	A / .l*	Course that all sources
christchurch. there is evidently insufficient industrial or other activities on these districts.Question 6: The proposals in Our Space are informed by a Capacity Assessment that considers future demands f housing and business land, based on demographic changes and projections from Statistics New Zealand, and likk changes in our economy (including through business sector trends and impacts from technological change). Do j agree or disagree with our evidence base and why?Agree/disagreeDo not agreeCommentas above, 100000vpd into christchurch daily for work would suggest insufficient employment base in selwyn and waimak, so whay make it worse worth 30000 more houses. are you expecting taxpayers and ratepayers to pay for the lifestyle choices of selwyn and waimak residents.Question 7: Our Space promotes greater densities around key centres to increase accessibility to employment a services by walking, cycling and public transport.This aligns with recent transport proposals that signal more high frequency bus routes and an intention to delive rapid transit along the northern and south-west transport corridors. Do you agree or disagree with this approact and why?Agree/disagreeSomewhat disagreeCommentRT is fine but are ccc ratepayers going to bear the brunt of that cost? i don't see why they should when the benefits will largely be to selwyn and waimak commuters. also given low PT uptake, i'd suggest it won't be used and people will till commute from selwyn and waimak by car.Question 8: Our Space aligns with broader infrastructure planning (including wastewater, water supply, stormwater, energy, telecommunications, community facilities, schools and healthcare] to help create sustainat cohesive and connected communities. Do you agree or disagree with this approach and why?	Agree/disagree	Somewhat disagree
housing and business land, based on demographic changes and projections from Statistics New Zealand, and like changes in our economy (including through business sector trends and impacts from technological change). Do ; agree or disagree with our evidence base and why? Agree/disagree Do not agree Comment as above, 100000vpd into christchurch daily for work would suggest insufficient employment base in selwyn and waimak, so whay make it worse worth 30000 more houses. are you expecting taxpayers and ratepayers to pay for the lifestyle choices of selwyn and waimak residents. Question 7: Our Space promotes greater densities around key centres to increase accessibility to employment a services by walking, cycling and public transport. This aligns with recent transport proposals that signal more high frequency bus routes and an intention to deliver angid transit along the northern and south-west transport corridors. Do you agree or disagree with this approact and why? Agree/disagree Somewhat disagree Comment RT is fine but are ccc ratepayers going to bear the brunt of that cost? i don't see why they should when the benefits will largely be to selwyn and waimak commuters, also given low PT uptake, i'd suggest it won't be used and people will till commute from selwyn and waimak by car. transport within the city - phasing of traffic signals is a massive problem in the city. it seems they are phased to disrupt and slow traffic in peak hours. uses more fuel, creates more emissions a slows bus trips. Question 8: Our Space aligns with broader infrastructure planning (including wastewater, water supply	Comment	
changes in our economy (including through business sector trends and impacts from technological change). Do j agree or disagree with our evidence base and why?
